*Special thanks to Mrs. Sondra Gail Lynch, NASDA Field Supervisory Enumerator, for the beautiful painting used on the cover. Mrs. Lynch titled this painting "Sunrise Tractor" and her son was the inspiration for this painting. This work of art was used on posters throughout the country to promote the 2002 Census of Agriculture.*

**S**upport and cooperation from Texas farmers, ranchers and agribusinesses are the keys to accurate, reliable agricultural statistics. The Texas Agricultural Statistics Service (TASS) appreciates the many individuals who provided the survey data which were the foundation for the estimates in this bulletin. We hope this publication will be a useful source of information to everyone involved in agriculture.

Texas Agricultural Statistics (2002) provides data on cash receipts, prices, livestock and livestock products, field crops, major vegetables, citrus fruits, peaches and pecans. The two most recent years of district and county level data are included for all major livestock items. District and county level data are also included for major crop items for 2001 and 2002.

The funding for publication of this annual bulletin was provided by the Texas Legislature through a cooperative program between the Texas Department of Agriculture and the Texas Agricultural Statistics Service of the United States Department of Agriculture.

STATE OF TEXAS  
OFFICE OF THE GOVERNOR

**Greetings:**

The State of Texas is blessed with a strong spirit of ingenuity that has made us a national leader in both the number and diversity of our farms and ranches. Cotton, corn, feed grains, rice and wheat continue to be among our state's primary crops, but Texas is also becoming known for its fruit and vegetable crops.

From the wide open grassy plains of the Panhandle to the deep woods of East Texas, the Lone Star State is home to ranches of all sizes and kinds. Although most ranches are devoted to raising cattle, you will also find horses, sheep, goats, hogs, chickens and exotic wildlife throughout the state.

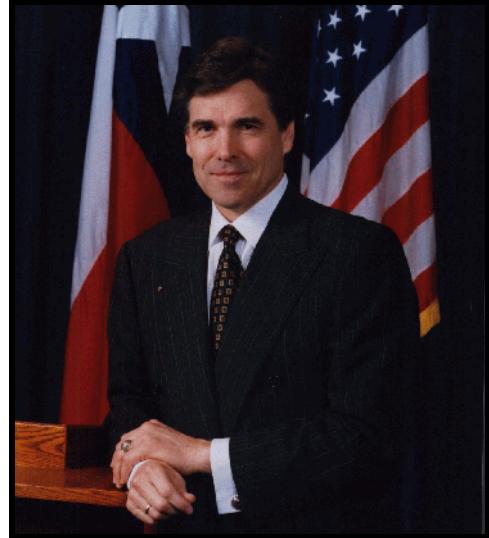

As a fifth generation Texan who grew up on a farm in West Texas, my roots run deep in Texas agriculture. Each day, the countless hours and tireless efforts of the men and women of agriculture help feed, clothe, and shelter our world.

The Texas Agricultural Statistics Service has once again teamed up with the Texas Department of Agriculture to provide you the most comprehensive and detailed source of statistics on agriculture in the United States. With a state as large and diverse as Texas, this is no easy task. I appreciate the individuals who work diligently to produce such a valuable resource and thank those of you who cooperated in compiling this report.

Sincerely,

A handwritten signature in black ink that reads "Rick Perry".

Rick Perry  
Governor

SUSAN COMBS, COMMISSIONER

[www.agr.state.tx.us](http://www.agr.state.tx.us)

My Fellow Texans:

Looking back over the last few years, I'm amazed at how far we've come in such a short time – and how much we have changed. Agriculture is truly an ever-evolving industry, with massive transformations in policy and technology occurring at what seems like a blink of an eye. From speaking out on child nutrition to tackling water issues to developing new initiatives to boost rural communities, we have made enormous progress together, and the future is bright. It has been a whirlwind experience, and I am honored to continue serving the farmers and ranchers of Texas.

My family's roots in agriculture date back many years, and they worked closely with their neighbors and friends to survive drought and other obstacles common to the industry. To me, this has become a prevailing theme. Agriculture is an industry in which folks partner up, ride out the challenges and share the successes. Even standing alone on my ranch in Brewster County I know that, as a rancher, I am not by myself in the vast lands of West Texas.

The Texas Department of Agriculture and the Texas Agricultural Statistics Service partnered up by signing a Cooperative Agreement in 1931 and began paving the way for expanded statistical estimates. With a state the size of Texas – nearly 800 miles wide, 800 miles long, encompassing 254 counties – this is no small task. Each year, TASS compiles its comprehensive statistics bulletin, and I appreciate the efforts of TASS and of the farmers and ranchers of Texas who help us gain valuable insight into the industry. The numbers compiled by TASS speak volumes about where we've been and where we're headed. It is an invaluable resource for policymakers and consumers alike, and I thank the staff at TASS for their relentless commitment to accuracy and their commendable dedication to Texas Agriculture. And I thank you for the valuable information you provide to make these reports possible.

Sincerely,

Susan Combs  
Commissioner

## A Message from the Director:

Over the past several years I have had the distinct honor and pleasure to visit with a lot of wonderful folks involved in Texas agriculture. Each visit has confirmed what I learned early in my life on my parents' ranch – Texas farmers and ranchers are without a doubt the most industrious, competent, and innovative group to be found. The fact is, agriculture, including all its agribusiness phases, adds over \$80 billion to the economic activity of Texas, making a significant impact on the State's economy.

The staff of the Texas Agricultural Statistics Service, in cooperation with the Texas Department of Agriculture, are proud to once again bring you this compilation of agricultural statistics. These statistics help assure that the results of your hard work are fairly and accurately represented in the market place as well as in State and National policy decisions. Furthermore, we owe a large "thank you" to the producers and agribusiness operators who provided the data to make this publication possible.

Every five years we conduct the Census of Agriculture, and 2002 was the "Year of the Census". The Census of Agriculture is the most comprehensive and detailed source of statistics portraying U.S. agriculture. In Texas alone, over 300,000 Ag Census report forms were mailed to farmers and ranchers. We worked diligently to make sure the agricultural community was aware that operations, large or small, needed to be counted – and we are gratified by the response. A tremendous "thank you" for taking the time to complete and return your Ag Census form. The results of this important project will be available in February 2004.

I also want to take this opportunity to emphasize our agency's confidentiality pledge to you, the producers and agribusiness operators included in our surveys. We do not disclose any data about any individual operation. The confidentiality of the answers you provide is protected by Federal law, Title 7, U.S. Code. There has never been a breach of this trust and we will continue to vigorously safeguard the privacy of your reports.

On behalf of all of us with Texas Agricultural Statistics Service, we wish you the very best – along with a beautiful Texas sky, and some rain, too!

Regards,

Robin O. Roark  
Director

# **2002**

## **AGRICULTURAL SUMMARY**

The 2002 season began with moderately dry conditions across many areas of the state. Dry conditions were generally a carry-over from the previous fall. Heavy supplemental feeding was necessary in many areas during late winter and continued well into the summer months. Small grains entered the year under stressed conditions. Some abandonment occurred due to these conditions. As spring approached, statewide conditions remained variable. Planting of summer crops began on schedule in southern locations and progressed northward. However, high winds and sparse amounts of moisture caused delays in normal planting activities. Prewatering was required for many crops. Early maturity, abandonment, late or no emergence, and replanting were common across many areas of the state due to the dry situation. Pastures further declined, which led to reduction in livestock herds. Passing storms in a few areas caused localized flooding, but no widespread rain events had taken place. By late spring, conditions had not changed much, except for some areas where severely dry conditions had caused major stress to crops and pastures. Insect activity, especially from grasshoppers, reached critical levels and major damage occurred to crops and pastures in many locations. By early summer, conditions had improved in some areas. Unseasonably heavy storms blanketed many areas of the state, bringing an end to parched conditions. By mid to late summer, many pastures had recovered, and hay growth and production had improved. Rainfall amounts were ideal for some crops, but for some it came too late in the growing season. As summer progressed and fall began harvest was underway across the state. Harvest yields were below average in areas that had been too dry during the growing season. Storms during fall months caused wet conditions in some areas, which hampered harvest activities and affected crop quality. Many pastures were considered adequate as winter approached. Supplemental feeding was necessary in areas that remained dry. Planting of small grains progressed throughout the fall and early winter. Grazing of small grain fields was active in many locations. Moisture levels at year's end were adequate in many areas as prospects for a new season were good. Vegetable and citrus production progressed a little behind normal across Valley locations, but moisture levels had improved in the region.

Conditions in January were dry in many areas across the state. Harvest of previous year's row crops had been completed except for some isolated fields of cotton. Moisture stress continued from the previous year in small grains. Some producers were forced to replant their grain as seedling death had occurred. Insect populations were active in some areas and further damage to many small grain crops was seen. Land preparation was active in most areas. Pastures declined across the state due to the continued dry conditions. As a result of poor pasture conditions, body condition in livestock declined as many producers were unable to meet feed requirements. Supplemental feeding became necessary in most counties. Some planting had begun in South Texas and harvest of vegetables made progress.

Conditions were variable during the month of February. In early months some locations reported record-breaking temperatures, however they were soon followed by passing cold fronts which brought high winds and isolated snow showers to areas of the Plains. Elsewhere, only light rain showers were reported. Stress in small grains continued as the result of dry conditions. Insect populations continued to build and caused varying levels of damage. Land preparation was active across the state, but some areas were too dry and producers waited for rainfall before beginning farming activities. Planting of summer crops continued to move northward, but a few locations in southern areas were too wet and drying out was necessary. Range and pastures continued to decline across the state with the exception of some eastern locations where rainfall had been adequate. Supplemental feeding was heavy in most areas and some producers were totally out of hay supplies. Harvest of vegetables continued in the Lower Valley.

March began with freezing and record low temperatures across many areas of the state. Some areas also reported sleet and snow showers. Small grains were additionally stressed and some death loss in both irrigated and dryland fields occurred. By mid month, conditions varied from extremely wet in some areas to dry and windy in others. Abandonment of acreage was being considered by many producers in drier areas. Land preparation continued where conditions allowed. Emergence of earlier planted crops was variable due to moisture shortages. Range and pasture conditions were variable across the state, and supplemental feeding was active in many locations. Reduction and some herd liquidation continued to occur. Water available to livestock remained short in a few locations. Harvest of vegetables continued in the Valley and Winter Garden locations.

April began with normal temperatures across the state. Early in the month, some areas received severe storms with heavy rainfall, while other areas remained dry. In many areas, small grains continued to suffer from moisture stress. A few locations across the Plains reported a total loss of the wheat crop. Blowing dust delayed farming activities from time to time across areas of the Plains. By mid to late month, some widespread showers brought relief to many moisture stressed areas around the state. In areas where rains fell, small grains showed some recovery. Abandonment and crop failure had occurred in many other locations. Prewatering was necessary before many crops could be planted, and in some locations, rain was needed before planting could occur. In the wettest locations, range and pasture conditions improved, however some areas remained dry and water was unavailable to some livestock herds. Grasshopper populations increased and caused further crop damage across the state.

Conditions in May were generally dry across the state. High winds continued to deplete soil moisture and blowing dust was a problem for many farming operations. In most areas, earlier planted crops continued to show signs of moisture stress, and maturity had accelerated some small grain fields. Dry planting was the only option for some producers, but some areas were too dry to plant. Moisture was extremely short in most areas of the state. By mid-month, some crop damage was reported in various locations as the result of heavy thunderstorms. The state remained mostly dry throughout the month. Livestock herd reductions were common and supplemental feeding remained a must in most areas. Water available to livestock was depleted in some areas, and hauling water was necessary. Insect populations, especially grasshoppers, caused heavy losses to both crops and pastures in many areas.

June began with unsettled conditions in most areas of the state. Storms accompanied by heavy rainfall and some hail crossed portions of the Plains. Crop damage varied across the area, and some locations had severe losses. Sea breeze showers occurred in southern locations, however only minor accumulations were recorded. Replanting remained active as the result of earlier storms damage. In southern areas, many producers indicated rainfall had come too little and too late to benefit some row crops. Harvest of small grains was mostly completed. In areas where earlier heavy rains fell, some producers reported that small grains had sprouted heads. Some producers had not completed summer planting, but planting in dry soils was the only option for many producers. Supplemental feeding of livestock remained active and some producers were relying on CPR grazing to sustain their herds. Grasshopper populations were high and caused major damage to crops and pastures.

Conditions in July changed rapidly for most of the state. Heavy rains associated with a tropical low pressure came early in the month to many areas. Severe flooding replaced dry conditions in most areas of the state. A few lakes and rivers were filled or flowed at all time capacities. Property damage in some areas was high, and some losses to livestock and crops occurred as the result of the heavy rainfall. Harvest of summer crops was on hold in many areas as conditions were too wet to support harvest equipment. Developing crops in wet areas benefitted and recovery of ranges and pastures had begun. Soils were drying out by late month and harvest resumed in many locations. Land preparation was active and haying operations had moved forward. Despite the rain, some parts of the state remained dry and conditions were unimproved in these locations. Supplemental feeding subsided in the wet areas, but continued in other areas. Some areas had reported an abundance of hay by late month. Grasshopper and armyworm populations were high in some areas at month's end.

Conditions were seasonably hot in August across the state, but many areas received additional moisture during the month. Cool fronts and tropical moisture brought considerable amounts of moisture to many locations. However, a few areas remained dry during the month and crops in these areas remained under severe moisture stress. Harvest of summer crops became more widespread during the month and only brief delays occurred from weather problems. Land preparation was active and planting of small grains had begun in isolated locations. Haying operations were thriving and many producers reported a surplus of hay. Supplemental feeding was about normal for this time of year in most areas, but remained high in the driest areas. Water available for livestock was short in many of these areas. Insect populations including green bugs, armyworms, grasshoppers, and boll worms, remained high.

Early September was mostly hot across the state. Scattered thunderstorms, some severe, were reported in many areas of North Texas and the Edwards Plateau. Tropical Storm Fay dropped large amounts of rain in coastal and some central locations. Land preparation and harvesting activities remained active across the state, but some delays occurred. Planting of small grains intensified with the aid of rainfall across the state. Haying operations continued to improve, but some delays were seen from time to time. Some areas remained dry and moisture stress continued. Supplemental feeding remained necessary in some areas, but had eased in areas with improved pastures. Grasshopper pressure had decreased by late month, but many producers were experiencing armyworm problems.

Conditions in October were considerably cooler across the entire state. Areas of the Plains received heavy rainfall and some large hail early in the month, while parts of the Gulf Coast and East Texas received rainfall associated with Hurricane Lili. Remaining harvest moved ahead across the state, but delays were frequent. Planting of small grains continued as conditions allowed. Land preparations were also active. Some areas remained excessively dry and progress in these areas was minimal. Pasture conditions were variable across the state with some areas showing adequate recovery while others were severely poor. Hay baling operations remained active and many producers reported a surplus of hay. Supplemental feeding was about normal in most areas, however remained high in the driest locations. By late month, conditions had declined as light snow, freezing rain and showers crossed the Plains. Elsewhere, moderate to heavy rainfall suspended farming activities.

Conditions in early November were mostly undesirable in many areas. Some areas received as much as five to six inches of rainfall. Freezing temperatures occurred in some areas of the Plains. By the second week, conditions had improved across the state and drying out was in progress. The warmer temperatures enhanced the growth of small grains as grazing of some small grain fields was in progress. Harvest of remaining row crops made good progress as drying out became sufficient in many locations. As the month progressed, light frost accelerated maturity in remaining summer crops in several areas. Supplemental feeding gradually increased across the state as pasture dormancy moved southward as the result of colder sustained temperatures. End of season haying operations continued in a few locations.

Conditions in December were mostly cold and wet across many areas of the state. Widespread snowfall and freezing rain covered many areas of the Plains. Southern areas received varied amounts of rainfall and some localized flooding was reported. Between weather fronts, harvest of summer crops was mostly completed, however a few crops were abandoned due to the lingering wet conditions. Small grains continued to make progress, but colder conditions slowed the process. Land preparation and late planting of small grains was active in a few areas where soils were dry enough. Supplemental feeding increased across the state as winter like conditions remained constant. Sickness in livestock was about average for this time of year. Citrus harvest was active in portions of the Lower Valley.

<sup>1</sup> A **farm** is defined as "any establishment from which \$1,000 or more of agricultural products were sold or would normally be sold during the year". Government payments are included in sales. Institutional farms, experimental and research farms, and Indian Reservations are included as farms. Places with their entire acreage enrolled in the Conservation Reserve Program, set-aside, or other government programs are considered operating farms. **Land in farms** is all land operated by farms during the year. It includes crop acreage, wasteland, woodland, pasture, land in summer fallow, idle cropland, and land enrolled in the Conservation Reserve Program and other set-aside or commodity acreage programs. It excludes public, industrial and grazing association land and nonagricultural land. It excludes all land operated by establishments not qualifying as farms.

**LEADING STATES IN VALUE  
OF FARM REAL ESTATE, JANUARY 1, 2002\***

State	Million dollars
1 TEXAS	93,600
2 California	85,870

Source: Economic Research Service, USDA <sup>1</sup> Final sector output is the gross value of the commodities and services produced within a year. Net value-added is the sector's contribution to the national economy and is the sum of the income from production earned by all factors-of-production. Net farm income is the farm operators' share of income from the sector's production activities. The concept presented is consistent with that employed by the Organization for Economic Cooperation and Development. <sup>2</sup> A positive value of inventory change represents current-year production not sold by December 31. A negative value is an offset to production from prior years included in current-year sales. \* Revised.

<sup>1</sup> The marketing season varies by crop: corn and Upland cotton, August through July; cottonseed, August through February; all hay and alfalfa hay, May through April. Marketing year average prices do not include government program payments or allowances for unredeemed loans and purchases by the government. <sup>2</sup> Cottonseed prices for missing months are not published due to small volume of sales. <sup>3</sup> The all hay price is the weighted average price of the two groups, alfalfa and other hay.

Prices received . . . . .	649	621	* 102	98
Parity ratio <sup>1</sup> . . . . .	* 40	38	* 83	79
Adjusted parity ratio <sup>2</sup> . . . . .	44	40	-	-

<sup>1</sup> Ratio of prices received by farmers to the index of commodities and services, interest, taxes and wage rates. <sup>2</sup> Ratio of the index of prices received by farmers, after adjustment for government payments, to the index of prices paid for commodities and services, interest, taxes and wage rates. \* Revised.

**UNITED STATES GOVERNMENT PAYMENTS AS PERCENTAGE OF CASH RECEIPTS FROM MARKETINGS,  
INDEX OF PRICES RECEIVED, PRICES PAID, PARITY RATIO AND ADJUSTED PARITY RATIO, 1998-2002**

Year	Government payments as percent of cash receipts from marketings	1910-14 = 100			Parity ratio <sup>1</sup>	
		Prices received index		Prices paid index	Actual	Adjusted <sup>3</sup>
		Actual	Adjusted <sup>2</sup>			
[1]	[2]	[3]	[4]	<u>Percent</u>		
1998 . . . . .	6.21	645	685	1,532	42	45
1999 . . . . .	* 11.47	606	* 676	1,531	40	44
2000 . . . . .	* 11.82	* 611	* 683	1,594	38	43
2001 . . . . .	* 10.21	649	* 715	* 1,642	* 40	44
2002 . . . . .	6.14	621	659	1,646	38	40

<sup>1</sup> Parity ratios are computed monthly by dividing the index of prices received for all farm products by the index of prices paid for Commodities and Services, Interest, Taxes and Wage Rates (both monthly indexes using a 1910-14 base). The annual parity ratio is a straight average of the twelve individual (January through December) monthly ratios. <sup>2</sup> Adjusted to include government payments by multiplying column 2 by the ratio of [(100 + column 1 value)/100]. <sup>3</sup> The adjusted ratio includes government payments to farmers. \* Revised.

2002 . . . . .	310	1,550	480,500	100
2003 . . . . .	311	1,650	513,150	110

**TEXAS MILK COW OPERATIONS AND INVENTORY, BY SIZE GROUPS, 1998-2002**

Year	Operations <sup>1</sup> having:						Percent of inventory on operations having:					
	1-29 head	30-49 head	50-99 head	100-199 head	200-499 head	500+ head	1-29 head	30-49 head	50-99 head	100-199 head	200-499 head	500+ head
	<u>Number</u>											
1998	1,500	200	400	500	400	200	.8	2.0	8.2	20.0	29.0	40.0
1999	1,300	190	380	390	370	170	1.0	2.0	8.0	17.0	32.0	40.0
2000	1,100	140	330	400	360	170	1.0	1.4	6.6	17.0	32.0	42.0
2001	950	100	250	320	320	160	1.0	1.0	5.0	14.0	31.0	48.0
2002	900	90	200	290	260	160	1.0	1.0	4.5	13.5	27.0	53.0

<sup>1</sup> An operation is any place having one or more milk cows on hand during the year, excluding cows used to nurse calves. Percents reflect average distributions based primarily on end-of-year surveys.

**TEXAS MILK COWS:**  
**Number of Milk Cow Operations, Inventory and Production of Milk and Milkfat, 1998-2002**

Year	Number of operations	Annual average number of milk cows <sup>1</sup>	Production of milk and milkfat <sup>2</sup>					
			Per milk cow		Percent of fat in all milk produced	Total		
			Milk	Milkfat		Milk	Milkfat	
	<u>Thousands</u>		<u>Pounds</u>		<u>Percent</u>		<u>Million pounds</u>	
1998 . . . . .	3.2	352	15,923	568	3.57	5,605	200.1	
1999 . . . . .	2.8	345	16,284	586	3.60	5,618	202.2	
2000 . . . . .	2.5	348	16,483	602	3.65	5,736	209.4	
2001 . . . . .	2.1	325	* 15,711	* 575	3.66	* 5,106	* 186.9	
2002 . . . . .	1.9	309	17,152	635	3.70	5,300	196.1	

<sup>1</sup> Average number during year excluding heifers that have not freshened. <sup>2</sup> Excludes milk sucked by calves. \* Revised.

### TEXAS MILK AND CREAM: Marketings, Income and Value, 1998-2002

Year	Combined marketings of milk and cream			Used for milk, cream and butter on operations where produced		Gross producer income <sup>3</sup>	Value of milk produced <sup>2/4</sup>
	Milk utilized	Average returns <sup>1</sup>	Cash receipts from marketings	Milk utilized	Value <sup>2</sup>		
	<u>Million lbs.</u>	<u>Dollars</u>	<u>1,000 dols.</u>	<u>Million lbs.</u>	<u>1,000 dollars</u>		
1998 . . .	5,583	15.70	4.40	876,531	1	157	876,688
1999 . . .	5,596	15.00	4.17	839,400	1	150	839,550
2000 . . .	5,717	13.40	3.67	766,078	1	134	766,212
2001 . . .	* 5,083	15.80	4.32	* 803,114	2	316	* 803,430
2002 . . .	5,276	12.90	3.49	680,604	2	258	680,862

<sup>1</sup> Cash receipts divided by milk for milkfat represented in combined marketings. <sup>2</sup> Valued at average return per 100 pounds of milk in combined marketings of milk and cream. <sup>3</sup> Cash receipts from marketings of milk and cream plus value of milk used for home consumption. <sup>4</sup> Includes value of milk fed to calves. \* Revised.

### TEXAS MILK AND CREAM: Quantity Used and Marketed, Price and Cash Receipts, 1998-2002

Year	Total milk produced	Milk used where produced		Milk marketed by producers		
		Fed to calves <sup>1</sup>	Used for milk, cream and butter	Sold to plants and dealers as whole milk <sup>2</sup>		
				Quantity	Price per 100 pounds	Cash receipts
<u>Million pounds</u>						
1998 . . . . .	5,605	21	1	5,583	15.70	876,531
1999 . . . . .	5,618	21	1	5,596	15.00	839,400
2000 . . . . .	5,736	18	1	5,717	13.40	766,078
2001 . . . . .	* 5,106	21	2	* 5,083	15.80	* 803,114
2002 . . . . .	5,300	22	2	5,276	12.90	680,604

<sup>1</sup> Excludes milk sucked by calves. <sup>2</sup> Includes sales directly to consumers by producers who sell only milk from their herds; includes milk produced by institutional herds. \* Revised.

### TEXAS MANUFACTURED DAIRY PRODUCTS: Production of Specified Products, 1998-2002

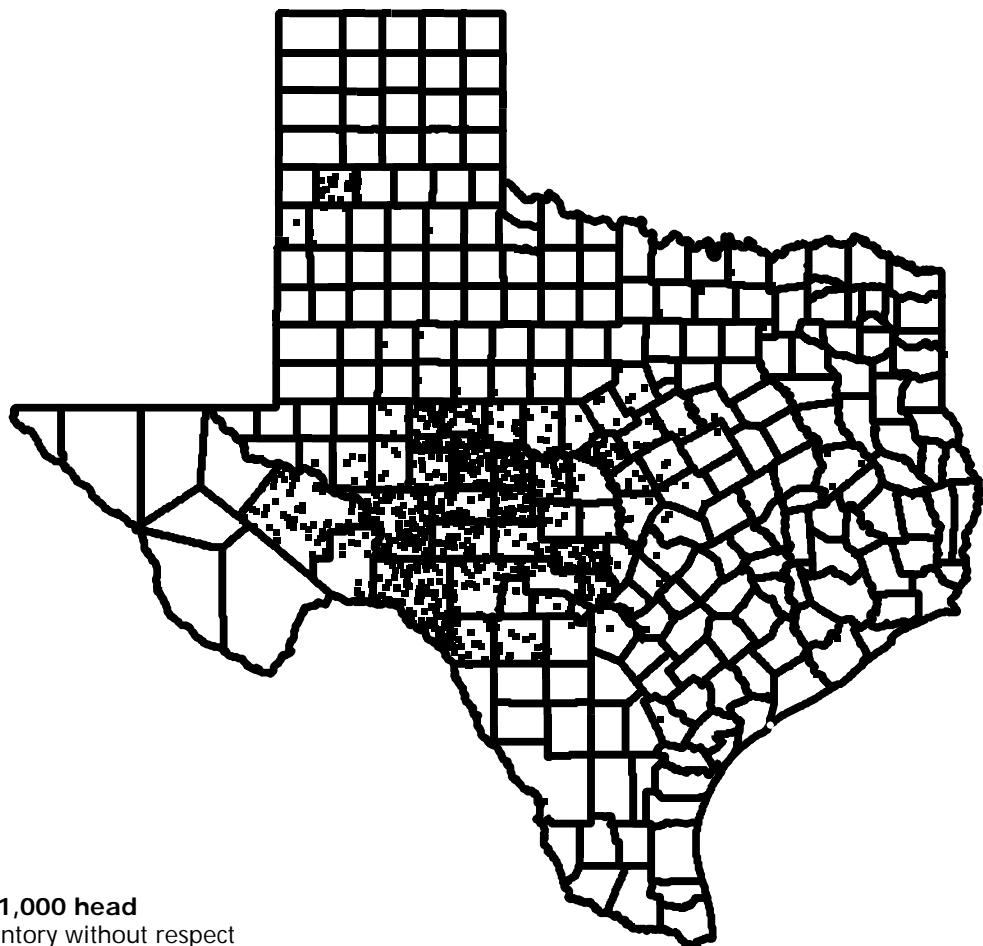

Product	1998	1999	2000	2001	2002	<u>Thousand pounds</u>
						<u>Thousand gallons</u>
<b>COTTAGE CHEESE:</b>						
Curd <sup>1</sup> . . . . .	9,926	9,313	9,624	4/	15,366	
Creamed <sup>2</sup> . . . . .	7,307	5,789	7,709	10,307	15,094	
Lowfat <sup>3</sup> . . . . .	5,280	4,543	4,304	4/	7,087	
<b>FROZEN PRODUCTS AND MIX:</b>						
Total ice cream, regular . . . . .	59,168	69,685	63,542	* 61,740	53,098	
Total ice cream regular, hard . . . . .	53,387	60,461	56,351	50,859	47,575	
Total milk sherbet . . . . .	4/	4/	4/	1,897	1,752	
Ice cream mix, regular . . . . .	33,396	39,226	33,983	* 32,787	30,848	
Lowfat ice cream mix <sup>5</sup> . . . . .	24,030	20,738	20,824	25,406	24,401	
Milk sherbet mix . . . . .	1,299	1,420	1,290	1,197	1,107	

<sup>1</sup> Mostly used for processing into fully creamed or lowfat cottage cheese. <sup>2</sup> Milkfat content 4.0 percent or more. <sup>3</sup> Milkfat content less than 4.0 percent.

<sup>4</sup> To avoid disclosure of individual operations, production is not shown when fewer than three plants reported. <sup>5</sup> Includes milkshake mix. \* Revised.

**TEXAS COMMERCIAL LIVESTOCK SLAUGHTER: Live Weight and Red Meat Production, 1998-2002**

Year	Total live weight <sup>1</sup>				Total red meat production <sup>2</sup>
	Cattle	Calves	Sheep and lambs	Hogs	
<i>1,000 pounds</i>					
1998 .....	7,730,824	18,349	3/	99,028	4,862,100
1999 .....	7,744,483	15,121	69,216	125,006	4,910,500
2000 .....	7,604,784	18,438	62,853	122,980	4,844,000
2001 .....	7,515,759	8,869	61,749	118,070	4,780,800
2002 .....	7,675,296	8,863	42,692	121,127	4,880,000

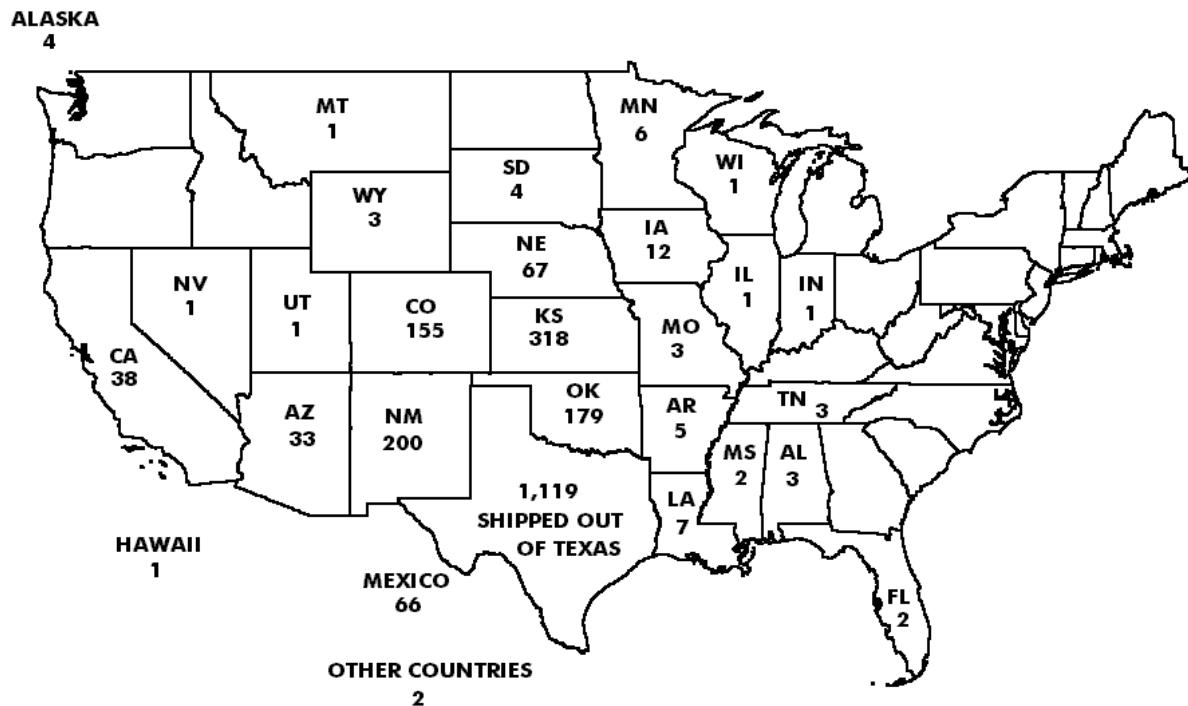

<sup>1</sup> Includes slaughter in federally inspected and in other slaughter plants, but excludes animals slaughtered on farms. <sup>2</sup> Includes total beef, veal, pork, lamb and mutton; excludes farm slaughter. <sup>3</sup> Not published to avoid disclosing individual operations.

## CATTLE AND CALVES: Movement Out of and Into Texas on Health Certificates, 2002 <sup>1</sup>

Texas Animal Health Commission (TAHC) and U.S. Department of Agriculture/Animal and Plant Health Inspection Service/Veterinary Services (USDA/APHIS/VS) tabulate head counts from health certificates. These tabulations include truck and rail movements out of and into Texas. Under Texas law, all livestock must have a health certificate unless consigned to a state or federally inspected slaughtering establishment or specifically approved livestock market.

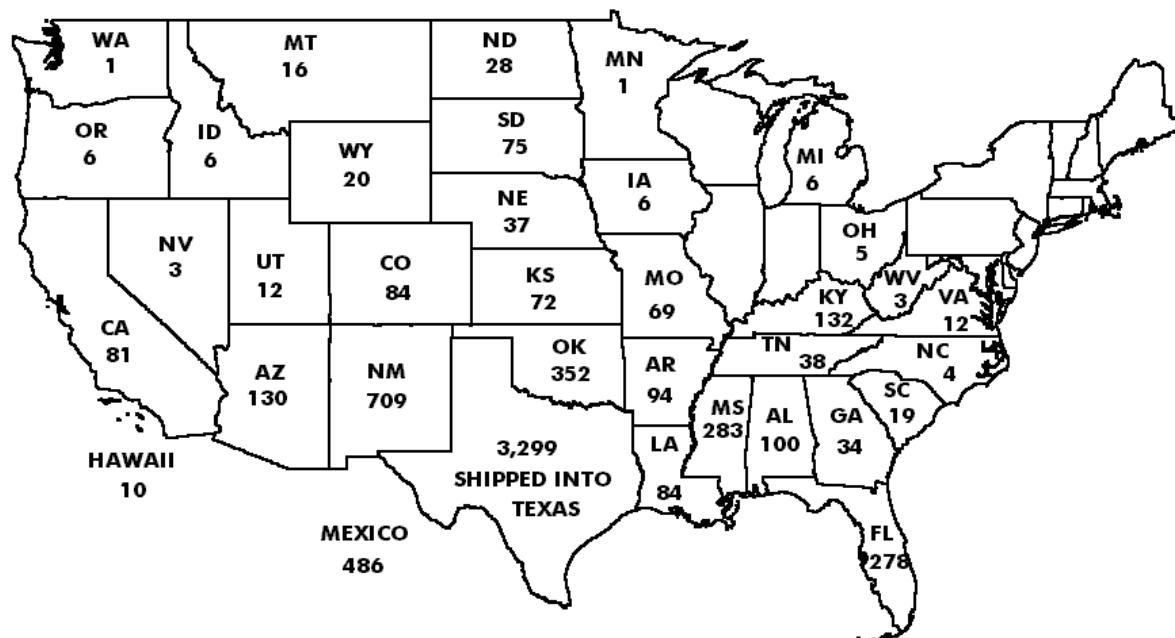

### OUTSHIPMENTS (1,000 Head)

Destination of cattle and calves as designated on health certificates tabulated by TAHC and USDA/APHIS/VS, 2002. Data include animals designated for slaughter and reflect movement to other states and countries, including Mexico. States receiving less than 500 head are not shown.

### INSHIPMENTS (1,000 Head)

Origin of cattle and calves as designated on health certificates tabulated by TAHC and USDA/APHIS/VS, 2002. Data exclude animals designated for slaughter and reflect movement from other states and countries, including Mexico. States sending less than 500 head are not shown.

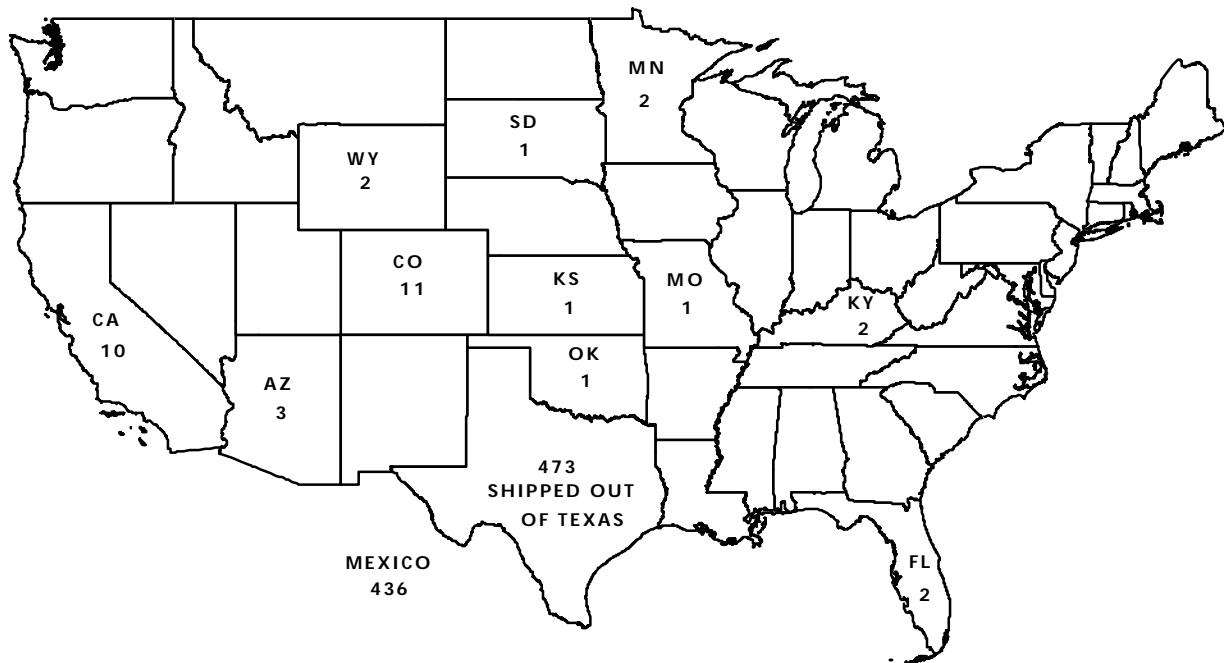

<sup>1</sup> Cattle tabulations do not include dairy cattle.

## **SHEEP AND LAMBS: Movement Out of and Into Texas on Health Certificates and Sheep Scabies Inspection Certificates, 2002**

Texas Animal Health Commission (TAHC) and U.S. Department of Agriculture/Animal and Plant Health Inspection Service/Veterinary Services (USDA/APHIS/VS) tabulate health certificates and sheep scabies inspection certificates. These tabulations include truck and rail movements out of and into Texas. Under Texas law, all livestock must have a health certificate unless consigned to a state or federally inspected slaughtering establishment or specifically approved auction market.

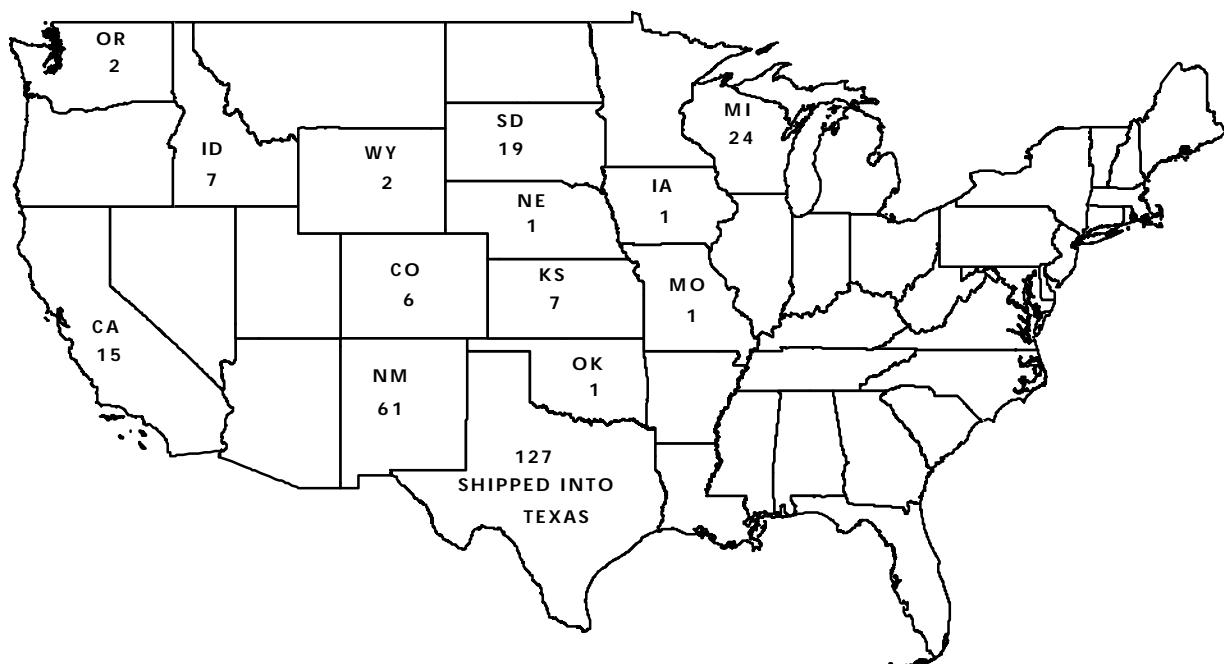

### **OUTSHIPMENTS (1,000 Head)**

Destination of sheep and lambs shipped out of Texas (truck and rail) as designated on health certificates or sheep scabies inspection certificates tabulated by TAHC and USDA/APHIS/VS, 2002. Data include animals designated for slaughter and reflect movement to other states and countries, including Mexico. States receiving less than 500 head are not shown.

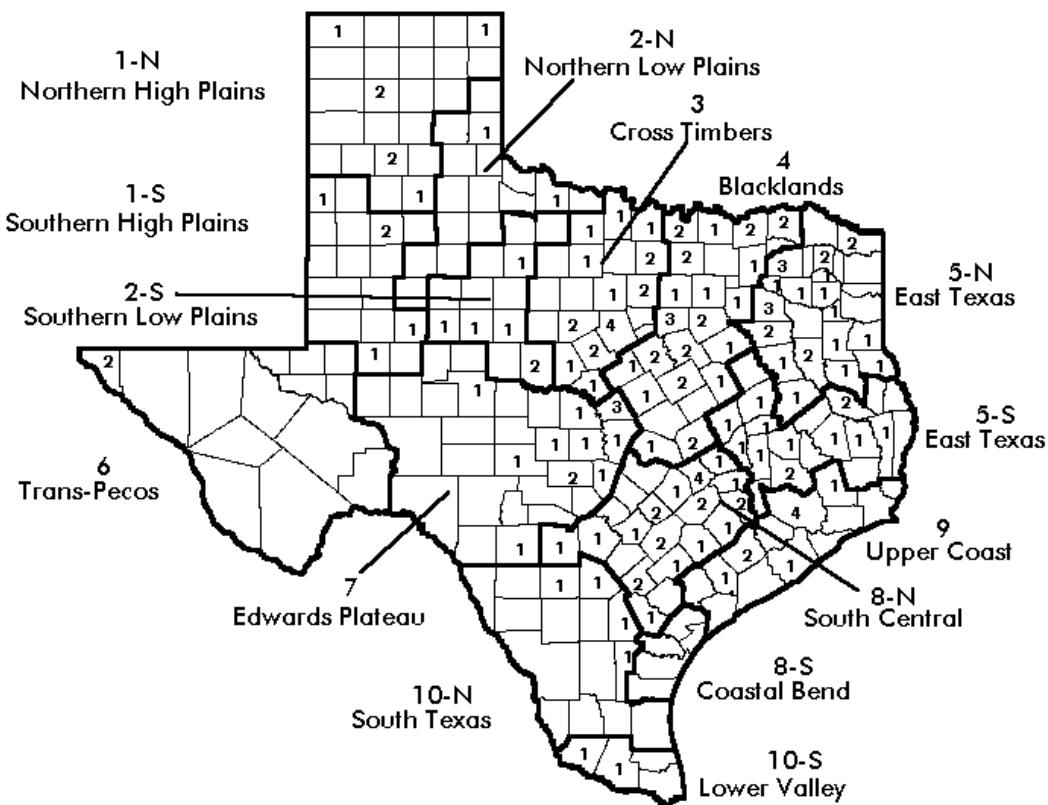

### **INSHIPMENTS (1,000 Head)**

Origin of sheep and lambs shipped into Texas (truck and rail) as designated on health certificates or sheep scabies inspection certificates tabulated by TAHC and USDA/APHIS/VS, 2002. Data exclude animals designated for slaughter and reflect movement from other states only. States sending less than 500 head are not shown.

## TEXAS LIVESTOCK AUCTION MARKETS

There are 162 state inspected livestock auctions in Texas. The map below shows the distribution of state inspected auctions as of December, 2002. Counts of livestock are taken from inspection receipts filed by auction inspectors of the Texas Animal Health Commission (TAHC). Monthly tabulations are available through the cooperation of the TAHC.

# **Vegetables, Fruit and Pecans**

# **Texas Vegetable, Fruit and Pecan Summary**

## **Vegetables**

Texas continued to be one of the five leading states in production of fresh market vegetables. In 2002, Texas ranked fifth in area harvested, accounting for 4.8 percent of the United States vegetable acreage. Texas also ranked fifth in production, with 4.5 percent of the U.S. total, and fourth in value, accounting for 4.2 percent of the U.S. total. In 2002, Texas producers harvested 125,000 acres of commercial vegetables, down 8 percent from the year before. The value of production from this acreage and products totaled \$429 million, up 1 percent from 2001. Total production of all vegetable crops decreased from 2001. Production was influenced mostly by a drop in harvested acres. Onions were the number one cash vegetable crop for Texas, cantaloupe was second followed by watermelons.

## **Citrus**

Texas grapefruit production for the 2002-2003 season totaled 5.65 million boxes, down 4 percent. The 2002-2003 all orange production totaled 1.57 million boxes, down 10 percent. Quality was slightly lower than the previous season.

## **Pecans**

The 2002 Texas pecan crop was estimated at 40 million pounds, down 35 million pounds from the 2001 crop. Pecan production was affected by heavy rains and flooding. Prices increased from the previous year and averaged 83.5 cents per pound. Production of native varieties totaled 20 million pounds, down from the 25 million pounds produced in 2001; production of improved varieties totaled 20 million pounds, down from 50 million pounds in 2001.

## **Peaches**

Texas utilized peach production for 2002 was estimated at 238,000 bushels, down from 542,000 bushels in 2001. Bad weather and a late freeze damaged a large portion of the 2002 crop potential. Utilized production is the total of peach sales for fresh market and processing, as well as peaches consumed on the farm. Total production in 2002 was 250,000 bushels.

## **Grapes**

Bad weather, disease and pests played a big role in curtailing the 2002 Texas grape production tonnage. Texas vineyards and wineries were only able to harvest 4,400 tons of grapes for wine production. Production decreased by more than one-half of the 9,300 tons produced in 2001. An estimated 2,900 producing acres were available for harvest and yielded an average of 1.5 tons per acre, down 1.7 tons from one year earlier. The total estimated value of the 2002 crop was \$4.0 million with an average value per ton of \$910. Total value of production decreased by 52 percent from 2001.
